# ExecuteResult(ActionContext)

Executes the result operation of the action method synchronously. This method is called by MVC to process the result of an action method.

```
public override void ExecuteResult(ActionContext context)
```

## Parameters

**context** [ActionContext](#)

The context in which the result is executed. The context information includes information about the action that was executed and request information.

# ExecuteResultAsync(ActionContext)

Executes the result operation of the action method asynchronously. This method is called by MVC to process the result of an action method. The default implementation of this method calls the [ExecuteResult\(ActionContext\)](#) method and returns a completed task.

```
public override Task ExecuteResultAsync(ActionContext context)
```

## Parameters

**context** [ActionContext](#)

The context in which the result is executed. The context information includes information about the action that was executed and request information.

## Returns

[Task](#)

A task that represents the asynchronous execute operation.
